

Stepper Motors for the extremes

phytron

Vacuum
Cryogenic
Radiation

Space
Clean-room
Aircraft & Military

Water-proof
High Temperature
Food Grade.....

60 years strong

In the last six decades, a small engineering laboratory has become a leading, international, manufacturer with the largest program of stepper motors and stepper drives. The inventive and creative improvement of our products has consistently set new goals in the market place. Our solutions are targeted towards your future.

In 1947, Siegfried Auerhammer founded the company in Groebenzell, near Munich. During these early years, the company manufactured scientific and electronic instruments such as Geiger counters, seismographs, spectral devices and other equipment for physical analysis. The name Phytron derived from the use and technology of the earliest made products: **Physics** and **Electronics**.

From 1962, starting with power supply units,

battery

chargers, electronic DC voltage regulators and electric motor controllers, the first large scale production series were registered with the "phytron" trademark. By 1964, synchronous and stepper motor series ZSS and ZSH came into production. In the ensuing years, axis controllers, positioning drives, stepper motor power stages

with integrated axis controllers for bus systems, and stepper motors for the most extreme environmental conditions become products at the cutting-edge of advanced applications.

By 1984 Phytron started to manufacture stepper motors for use in vacuum.

Ten years later, the company was among the first enterprises in Germany to be accredited with ISO 9001.

Since 1998, Phytron holds a DIN EN 46001 certification for the production of electronics and stepper motors for special medical treatments and manufactures a dental range of special equipment for root canal treatment.

Today, Phytron enjoys the reputation for crossing the environmental boundaries as well as the flexibility in custom design serving the low and high volume customers.

Those who provide movement should move with the times

A consistent strive for perfection and decade long experience has helped us establish one of the most extensive ranged stepper motors and stepper motor controls with customers across the globe.

Our customers speak for our products. In every product and every individual solution, you will find the same passion for quality, professionalism, competence and dedication to detail enforced by the strict ISO 9001 standard.
